OM TECHNOLOGY

PRODUCT FOR MOLTEN METAL INDUSTRIES

CAST IRON WELDING ELECTRODE MACHINE

Mould /Casting Surface repair machine

DIGITAL CONTROL UNIT

FULL DIGITAL CONTROL
Makes the power output more accurate

NEW WELDING GUN SYSTEM
Longer-lasting use and faster installation

LOW TEMPERATURE WELDING
Small heat input, no annealing, no deformation

2400W POWER
Bigger power, More possibility

WITH OR WITHOUT ARGON GAS
Argon gas is not always necessary, save cost

SMALL COLOR DIFFERENCE
Metallurgical combination small color difference

Blowholes, sand drops, and shrinkage are common defects in castings. The defect rate in a foundry typically ranges from 10% to 30%. These rejected castings can result in significant losses if they are remelted or sold at a reduced price. In most cases, however, the defects occur in non-critical areas. In such situations, the OMT Cast weld cold welder is an ideal solution for repairing these defects effectively.

A GENIUS TOOL FOR CASTING DEFECT REPAIR

The electro-spark deposition (ESD) cold welding process utilizes high-energy power that is stored and released instantly between the electrode and the base material at a high frequency. Through air ionization, a channel is formed between the electrode and the substrate, creating a localized micro-region of extremely high temperature and pressure.

In this process, the electrode material is ionized and micro-melted into the substrate, resulting in a strong metallurgical bond.

Manufacturer of

Thermocouple Tips, Temperature Measuring Instruments, Samplers, Carbon Silicon Analyzer, Carbon Cups, Auxiliary Display & Other Foundry Products.

OM TECHNOLOGY

PRODUCT FOR MOLTEN METAL INDUSTRIES

Steel
Casting / Mould

Gray iron
Textile machinery / Cylinder

Ductile iron
Auto parts / Windmill casting

Copper
Power electrical facilities

Suitable For

Aluminum
Engine parts / Automobile hub

Cast iron
Pump / Industrial castings

Brass
Ship parts / Precision instruments

Other alloys
Auto parts / Industrial parts

The electro fusion process is suitable for all types of castings, including ductile iron used in auto parts and windmill casting. It is also compatible with gray iron found in cylinder and textile machinery.
Electro-spark deposition cold welding process is using the high-energy power stored and release instantly between electrode and matrix with high frequency release, through air ionization channels formed between the electrode and matrix to generate an instant high temperature and high pressure micro-region. While ion state of the electrode materials in micro-melt into the matrix, forming metallurgical combination

Blow Holes, Sand Drops, And Shrinkage Are Common Defects In Castings, With The Defect Casting Percentage Typically Ranging From 10% To 30% In A Foundry.
Remelting Or Selling These Rejected Castings At A Lower Price Can Result In Signi - ficant Losses. However, It Is Worth Noting That Most Defect Castings May Only Have A Few Defect Holes, Which Are Located In Less Critical Areas. In Such Cases, Thermo Castweld Becomes The Ideal Tool For Repairing Them.
Thermo CastWeld is a good tool for mould repairing. It can repair small damage/ crack/scratch for mould to extend using life.
